## **Explanation**

The LDS microfilmed most of the early Lincoln County Tennessee (LCT) court records. These microfilms have been available to researchers for many years. Additionally, they digitized the microfilms and made them available on the FamilySearch.org website. Finally, the LDS prepares the digitized data so that thousands of volunteers can index these records.

To find the online digitized records for a huge part of the USA, use this link: <https://www.familysearch.org/records/images/>

To find the online digitized records for LCT, use this link: <https://www.familysearch.org/records/images/search-results?page=1&place=395291>

As this moment, there are 389 LCT digitized microfilms available. However, they are not indexed yet. Moreover, there is no Table of Contents for them. This is why the above Table of Contents was created.

The first column (DGS) contains the link to the digitized microfilm. For example, the link to “Birth Index” is: <https://www.familysearch.org/records/images/search-results?dgsNumbers=007621547>

You should be taken directly to the digitized microfilm on FamilySearch.org. You will need to log in to get access.

The next column after “DGS” is “Images.” If “Images has a number showing only part of the microfilm, e.g., 333-350

You should go to image 333 to find the beginning of “Births.”

The next two columns are self explanatory.

Happy Hunting!
